DIGITAL SKILLS WALLET

Digital Skills Wallet: European Project to Develop Digital Skills using micro-credentials.

The **DigitalSkillsWallet consortium** is pleased to share significant progress in its mission to empower individuals with the essential digital skills needed for today's world.

Since its launch, the project has focused on developing a comprehensive ecosystem for **assessing, certifying, and validating digital skills**. At the heart of this effort are **Micro-Credentials**—digital certifications that allow learners to assess their competencies, earn recognition, and securely store their achievements in a digital wallet for easy access and sharing.

A core feature of the DigitalSkillsWallet platform is its **skills assessment system**, which measures a learner's knowledge through structured testing. Each micro-credential includes an assessment of at least 20 questions, with a passing threshold set at 75%.

To date, the consortium has developed **1,672 assessment questions** across **59 micro-credentials** within Competence Area 1, *Information and Data Literacy*. These cover key digital skills, including:
- Browsing, searching, and filtering data, information, and digital content
- Evaluating data, information, and digital content
- Managing data, information, and digital content

All questions were created using the platform's **authoring tool**, and have been translated into **Greek, Italian, and Romanian** to ensure accessibility across partner countries.

In parallel, the consortium is developing **120 short, interactive courses** in four languages. Once finalized, these will undergo pilot testing to validate both the quality and the reliability of the platform.

Looking ahead, the DigitalSkillsWallet project remains committed to its vision: **empowering individuals with the digital skills they need to succeed, while strengthening Europe's competitiveness and digital literacy.** The consortium looks forward to sharing further updates as the project advances.
